

Socket Head Cap Screws With Fine Thread DIN 912 (ISO 4762)

Fine Pitch Socket Head Cap Screws made in the UK and with a material grade of A4-80, suitable for use in salt water conditions. Fine pitch screws are used in conjunction with fine pitch nuts which are also available on this website. The extra thread engagement gained from the finer pitch gives a more secure and stronger fitment. Used where high levels of strength are required - a fine pitch bolt has a larger stress area creating better tension than its coarse pitch counterpart, also they are less inclined to loosening through vibration due to the thread incline being smaller.
